

Form Requirements

The form can be built using either **Google Forms** or a **custom-built solution**. It should meet the following criteria:

1. User Interface & Design

- Clean and user-friendly design for quick navigation.
 - Products to be displayed under **categorized sections** for better visibility.
 - Categories should include:
 - **Mangoes**
 - **Vegetables**
 - **Herbs**
 - **Fruits**
 - **Exotic Produce**
 - **Dates**
 - **Onions**
 - **Potatoes**
 - Each product should display:
 - **Product Name**
 - **Price**
 - **Quantity Selector** (e.g., dropdown or numeric input)
-

2. Essential Customer Details

The form must capture:

- **Full Name**
 - **Contact Number (WhatsApp enabled)**
 - Once the customer enters their mobile number, their **Company Name** should automatically populate based on a predefined database.
 - **Email Address**
 - **Delivery Address**
 - **Preferred Delivery Date**
 - **Special Instructions (Optional)**
-

3. Automated Calculation

- Include an automated **cart calculation** system that dynamically computes the total order value.
 - Display the running total at the bottom of the form before submission.
-

4. Price & Item Management

- Prices of all items change frequently; therefore, there should be an option in the **backend system** to:
 - **Change product pricing** on a daily basis.
 - **Add, edit, or remove items** from the product list for specific dates as needed.
-

5. Confirmation & Notifications

Upon form submission: ☒ Send an **order confirmation** to the customer via:

- **WhatsApp** (via Twilio API or similar)
- **Email** (Order summary with total price and confirmation details)

☒ Send an internal notification (via email) to the MK Fresh team containing:

- Customer details
- Order breakdown
- Total payable amount

☒ Ensure all orders are **consolidated in the backend** so that a **single report** can be generated. This report should be structured for easy uploading into our **ERP system** for streamlined inventory and sales management.

6. Backend Management

- Data should be captured in a **Google Sheet** or **database** for easy order tracking.
 - Consolidate orders by date to simplify the packing and dispatch process.
 - Implement **order filtering options** to sort data by product category, customer name, or delivery date.
-

7. Additional Features (Optional but Preferred)

- Add a '**Repeat Order**' button to simplify reordering for regular customers.

- Provide a **'Special Offers'** section to showcase promotional items.
- Integrate a **loyalty points system** in the future for frequent buyers.
